

VICTOR

Frontend & Fullstack Developer | UI/UX Designer

Kigali, Rwanda • • +250 7__ __ __ • [linkedin.com/in/yourname](#) • [github.com/yourhandle](#)

PROFILE

RQF Level 3 Software Development trainee (Rwanda TVET Board) with hands-on experience delivering production-ready frontend and fullstack work for real clients. Combines strong UI/UX design instincts with practical development skills across JavaScript, Vue.js, and Node.js. Comfortable owning a project end-to-end — from client-facing proposals and pricing to interactive mockups and deployment-ready code. Passionate about clean, production-quality interfaces and about building tools that make studying and technical work more visual and interactive.

TECHNICAL SKILLS

- Frontend: HTML, CSS, JavaScript (ES6+), Vue.js, responsive & mobile-first design
- Backend: Node.js, Nodemailer, PHP (PDO, prepared statements), REST API integration
- Databases: MongoDB (Compass), relational data modeling
- UI/UX & Design: Figma-style interface design, dark-themed & multi-step UI flows, Basic Graphic Design principles (color, layout, typography)
- Tools & Workflow: Git/GitHub, Netlify deployment, DOCX/report generation (docx.js), Linux (Debian/Wayland) systems familiarity
- Other: Hardware diagnostics (BIOS/CMOS troubleshooting, Linux audio debugging)

EXPERIENCE

Frontend & Fullstack Developer (Freelance/Client Projects) — Self-directed *Ongoing*

- Designed and built a dark-themed, multi-step checkout UI for INB Construction Company supporting mobile money, bank transfer, and smart wallet payments in RWF.
- Delivered a full-featured B2B admin settings panel with six modules: general settings, workspace, team management, security/SSO, billing, and API integrations.
- Authored a developer implementation guide translating design screenshots into dev-ready specs (color, spacing, layout) for a trade portal hero section.
- Built a Nodemailer-based HTML email template with OTP verification for a client authentication flow.
- Produced a full project package for INB Construction & Supply Co. Ltd — development report, interactive 7-page HTML mockup, and a priced client proposal (150,000 RWF, phased payment schedule).
- Built a Vue.js country phone code picker component (green/black theme, Rwanda default) for a personal portfolio.

EDUCATION & TRAINING

RQF Level 3, Software Development — Rwanda TVET Board (RTB) *In progress*

- Coursework: UI/UX Design (SWDUX301), JavaScript Fundamentals (SWDJF301), Basic Graphic Design (GENGD301), Vue.js Framework (SWDVF301)
- Built self-directed interactive study tools (HTML exam simulators with live scoring) to prepare for RTB assessments — consistently scoring 90+ in practice tests

PROJECTS

- MCU Movies & Characters Dataset — comprehensive MongoDB Compass-compatible JSON dataset with rich metadata
- Interactive RTB Exam Prep Tools — self-test HTML applications with predicted questions across multiple modules
- Vue.js Game Interface (SWDVF301, Unit 4) — game UI design, functionality, and Netlify deployment

INTERESTS

Software development, UI/UX and graphic design, hardware troubleshooting, and building interactive tools that blend design with practical engineering.
